Safe Untested

Look up a site. Get our rating.
Read what others think.
Write what you think.
Find out more

Norton Safe Web is a new reputation service from [Symantec](#). **Our servers analyze Web sites to see how they will affect you and your computer.** Then, using the Norton Toolbar installed on your PC, we let you know how safe a particular Web site might be before you view it. If you need to find out more about how a Web site might behave, we provide more detailed information right here on [Norton Safe Web](#).

Create an account

Signing up for an account is easy—you just need to pick a user name and a password, and enter your email address. We won't be sharing your email address with anyone, and

we send *very few* emails. [Sign up for Norton Safe Web Account](#) to get started! **If you are already a Norton user and have a valid Norton Account, it will work [here](#) too, so you don't have to create another account!**

Write a review of a Web site

Share your stories and experiences—good or bad—about any Web site that you feel strongly about! Help others avoid the same pitfalls that you've gone through on some sites. Plus, let us know which sites are extraordinary and exceptional.

“Reveals security threats on the websites you browse”

by [Elena Santos](#) about [McAfee SiteAdvisor](#)

McAfee SiteAdvisor protects you from potentially dangerous websites while browsing the web by using a three-color alarm system.

After installing McAfee SiteAdvisor, you'll see a new button on the browser interface, as well as an additional search field. Also, from now on, every time you use a search engine you'll see a small rating icon beside each result. These tools will help you detect risky websites before visiting them.

Using McAfee SiteAdvisor is really simple: a **green** icon means the site is safe, a **yellow** one means low risk and the **red** one stands for high

[Read more](#)

Pros

- An extra layer of security
- Detect potentially dangerous sites before visiting them
- Works for both Internet Explorer and Mozilla Firefox

Cons

- Doesn't work properly with Internet Explorer 9
- Tries to change the default search engine

Does not work properly with Internet Explorer 9
