

STOP ANNOYING PHONE CALLS

There are several ways to do this.
Hopefully, one fits your situation.

A series of several parallel white lines of varying lengths, slanted diagonally from the bottom-left towards the top-right, located on the right side of the slide.

- ▶ 'Perfect' Solution for Forrest Meiere.
- ▶ This requires that you have an 'Internet Phone'
(For example phone from Time Warner)

1: Use 'NoMoRobo'. This is a free service which maintains a huge database of 'bad' guys. Blocks them before they get to you.

2: Install 'VZ_Enhanced'. Free program.

▶ Nomorobo (No More Robot Calls)

<http://nomorobo.com>

They take care of everything.

▶ (Note: all links here are 'hot'; just click if connected to Internet)

If a 'bad' guy calls, you hear one ring and that's it. Just don't answer one ring calls.

- ▶ VZ_Enhanced
- ▶ <https://vzenhanced.github.io/>
You get a 'Call Log' displaying calls.

If you see one you want to block, just RightClick and chose 'Add to Ignore List'.

▶ VZ_Enhanced

▶ This program can block bad guys who hide their phone number. Many 'solutions' don't do this.

For example, NoMoRobo can't do this.
Standard Time Warner blocking can't do it.
For details of this program, go to
<http://meiere.com/VZ>

Forrest's Solution requires
Voice over IP
e.g. 'Internet Phone'

Peter Eisenberg has a solution
which should work with either
Landlines or VOIP; Sentry 2

(Next screen)

SENTRY 2
New and improved

Block all, not some

100% blocking of all spam calls, new or repeat

Fully automatic

No need to do anything, **SENTRY 2** does it for you

Preload your White List

Easy setup, great for seniors

SENTRY 2: What's new?

- **Preload "Good" numbers to White List** – *in my opinion, an awkward process, the forthcoming Sentry version 3 will solve this with a telephone keyboard.*

- **Create White List at setup, so you can enjoy automatic blocking right from the start** – *there are two ways to do this, preload the numbers or wait until you receive a "good" call and enter it in your White List.*

- **Auto save to White List**

When an unlisted caller hears SENTRY's voice message and presses 0, the caller's number will be automatically saved to the White List. – *I use mine in the "basic mode" so the caller doesn't get the Sentry message. I do, however, use the "Block no caller ID" function.*

- **Turn the ring off**

Now you can turn SENTRY's ring off if you need to.

- **Screen brightness improved.**
